

Lullaby of the Planets

Simon Roberts

How many times have you looked at the sky,
Wondering how far the planets must fly?
How they all move to a heavenly groove,
Do they all sleep till the morning?
What is on Mars, are there buses and cars?
Is there a school where you study the stars?
Is there a king ruling everything?
Whilst a bright sun is just dawning.
So many questions of the planets I know,
Is Venus brighter and colder than Neptune?
I'm sure Mercury's close to the Sun,
But do they all sleep through the night?

Part 1

Saturn has rings, truly beautiful things,
Uranus spins with five moons on its wings.
Finally Earth is the place of my birth,
Home is this planet we live on.
How many times have you looked at the sky,
Wondering how far the planets must fly?
How they all move to a heavenly groove,
Do they all sleep till the morning?
So many questions of the planets I know,
Is Venus brighter and colder than Neptune?
I'm sure Mercury's close to the sun,
But do they all sleep through the night?

So many questions of the planets I know,
Is Venus brighter and colder than Neptune?
I'm sure Mercury's close to the sun,
But do they all sleep through the night?
Do they all sleep through the night?
Do they all sleep through the night?

Part 2

Yes Saturn has rings, beautiful rings,
With five moons.
Yes finally Earth, place of my birth,
My homeland.
Oh how many times, looked at the sky,
In wonder.
Oh how they all move, heavenly,
Sleep till morning.
Ah...
Ah...
Ah...
Ah...
