

States Of Matter

Catherine Brentnall

Verse 1

Materials can be in diff'rent states,
That have diff'rent properties,
Water can flow or make steam when it's hot,
And when it's cold it can freeze.

Chorus

These diff'rent forms are called states of matter,
Solids, liquids, and gases too,
They all behave in different ways,
States of matter.

Verse 2

Solids always keep their volume and their shape,
Liquids keep their volume too,
But liquids change their shape depending on,
The container they're poured into.
Gases are often invisible,
You can't see them float about,
They don't keep their volume or their shape,
They can be compressed or spread out.

Chorus

Bridge

Heating and cooling,
Can change a material's state.
Liquids can become solids when they freeze,
And gases when they evaporate.

Chorus
